"Rust"s central gameplay is available in both singleplayer and multiplayer modes. When playing on a server with other players, combat is enabled and players must fight or flee from other hostile players who are also scavenging for resources. If a player is killed by another player they will not be able to respawn until they have been to a specified area of the map which acts as the game's 'spawn point'.",

The specific hacks used by rust players are often used by other games, and as such have been modified to suit the needs of rust. Using these cheats can result in a game ban on the account in question, but as the game is still in early access this is not guaranteed. Facepunch Studios bans players for using cheats on their servers, however this does not apply to singleplayer and on private servers which do not use the official Facepunch credentials.",

Always back up your world:Before installing a mod it is always a good idea to save your world before you do anything else. This way, if something does not work out and you need to uninstall the mod or require a clean save, you will not lose everything. This is very important and we cannot stress enough how important this step is for most players! Install it correctly:Installing mods is different for each of them because they all have different requirements and rules about what files they will change in Minecraft. For example, some mods will just replace certain files while others will replace a lot more. Make sure to read the mod's description and the developer's website and follow them accordingly. If you trust the mod's description or its developer in general then it is probably safe to install it. If you are unsure at all, it would be a good idea to examine each of your files before installing so that you can see if anything has been altered by this mod.",

Minecraft Servers are generally run on either a physical server or a virtual private server (VPS). A physical server hosted by the user and rented from third-party companies, ISPs, universities etc. or free services like NFOservers.com, Adverline.pl and VirtualRack.co.uk which are VPS's seems to be the most common way to host your Minecraft Server. A VPS or physical server is better for most, since it is more stable and customizable and can be set up to run on the same machine as the player's computer allowing for an instant jump in to a server when desired.",
